STAGEBID™ · CANONICAL FINANCIAL

Five years, *one engine.*

*Built bottom-up from the Year 1 user base, projected across a five-year growth curve.
This is the single source of truth for all investor materials.*

\$1.1M

YEAR 1 GROSS

\$75.0M

YEAR 5 GROSS

68×

5-YEAR GROWTH

01 · THE YEAR 1 FOUNDATION

The user base *that drives it.*

Every dollar in this model traces back to four Year 1 inputs. Revenue is derived by applying the StageBid™ service pricing and a 10% transaction take rate to this base.

02 · YEAR 1 REVENUE BUILD

Eight streams, *bottom-up.*

Assumptions anchored on the New Orleans launch market. 150 paying venues represents disciplined market penetration in NOLA Year 1, with a 60/25/10/5 artist tier split and standard per-venue activity rates. Adjust any lever and the whole five-year model recalculates.

01	Venue Subscriptions 150 paying venues × \$200/mo × 12	\$360,000
02	Artist Subscriptions 10,000 artists · blended free + 3 paid tiers	\$165,000
03	Ticketing 10% take on ticketed-show GTV	\$165,000
04	Venue Bookings 10% take on artist booking fees	\$165,000
05	Public Marketplace 2,000 transactions × \$770 × 10%	\$154,000
06	Merchandise 10% take on merch GTV	\$33,000
07	Go Live 10% take on livestream monetization	\$44,000
08	Ad Network CPM + flat-rate placements	\$14,000
YEAR 1 GROSS REVENUE		\$1,100,000

03 · THE GROWTH CURVE

Launch → 7.7× → 18× → 38× → 68×.

The curve reflects the classic startup adoption arc: a disciplined Year 1 NOLA launch establishing unit economics, an explosive Year 2 jump (+673%) as music cities come online, a Year 3 acceleration to national scale (+135%), and a maturing growth profile in Years 4 and 5 as the platform reaches category leadership. The four-sided flywheel does the work once it catches.

04 · FIVE-YEAR PROJECTION

By stream, *by year.*

REVENUE STREAM	YEAR 1	YEAR 2	YEAR 3	YEAR 4	YEAR 5
Venue Subscriptions	\$0.4M	\$2.8M	\$6.5M	\$13.7M	\$24.5M
Artist Subscriptions	\$0.2M	\$1.3M	\$3.0M	\$6.3M	\$11.2M

Ticketing	\$0.2M	\$1.3M	\$3.0M	\$6.3M	\$11.2M
Venue Bookings	\$0.2M	\$1.3M	\$3.0M	\$6.3M	\$11.2M
Public Marketplace	\$0.2M	\$1.2M	\$2.8M	\$5.9M	\$10.5M
Merchandise	\$0.0M	\$0.3M	\$0.6M	\$1.3M	\$2.2M
Go Live	\$0.0M	\$0.3M	\$0.8M	\$1.7M	\$3.0M
Ad Network	\$0.0M	\$0.1M	\$0.3M	\$0.5M	\$1.0M
GROSS REVENUE	\$1.1M	\$8.5M	\$20.0M	\$42.0M	\$75.0M

How this model works — and what still needs you.

Year 1 is computed, not assumed. The \$1.1M figure is built from your four user-base inputs (150 venues, 10K artists, 20K fans, 2K marketplace txns) and the service pricing — not a top-down guess. Change the inputs and the number moves with them.

Years 2–5 compound your growth curve. Year 2 explodes from the NOLA validation base (+673%) as music-city expansion launches. Year 3 reaches national scale (+135%). Years 4 and 5 mature into category leadership (+110%, +78%). The stream mix is held constant across years; we can vary individual stream growth if you want subscriptions and transactions to scale at different rates.

Two things to confirm. First, the Year 1 venue count (150 in NOLA represents ~40% of the addressable live music venues in the metro). Second, this is a **gross-revenue** model — the Business Plan layers in expense assumptions producing \$100K net Year 1 and \$9M net Year 3.

This supersedes the earlier 3-year model. Once you sign off on the assumptions, these figures become canonical and propagate to the business plan, pitch deck, executive summaries, and revenue model in one pass.
